Accenture Robotics Platform wins Invention of the Year

Email text:

It's remarkable just how far have we have advanced the science of robotics and artificial intelligence (A.I.) at Accenture.

Such confirmation comes by way of the patented Accenture Robotics Platform, our 2018 Invention of the Year winner.

Sharing in the honor are Cyrille Bataller, Managing Director – Accenture Technology, and Adrien Jacquot, technology architecture delivery senior analyst – Accenture Technology. Together, their development of the Accenture Robotics Platform is creating new frontiers for A.I. and robotic process automation (RPA).

But the Accenture Robotics Platform is unlike other RPA solutions that rely on low-level integration with application software and other specific connections to a particular business application.

“The Accenture Robotics Platform mimics human capabilities as it focuses on visual interpretation on the screen, as people do,” Cyrille explained. “It offers a universal solution that works well with any kind of application, be it commercial, custom or legacy.”

The Accenture Robotics Platform is no mere prototype or concept, but is in use by more than 30 Accenture projects with 65 more engagements in development — to help our clients improve productivity and quality of services, unlock the trapped value of data and automate processes from end-to-end.

Our inventors say the Accenture Robotics Platform is all about innovating in the New — applying multiple A.I. technologies to understand what's happening on screen and using natural language processing to read and understand text.

Adrien noted that A.I. are solutions are increasingly important in our work with clients.

“The Accenture Robotics Platform forms the foundation for this growing generation of A.I.-powered robots,” he said.

As winners of the Invention of the Year contest, Cyrille and Adrien will be honored as one of the Greater Than Awards category winners during a special celebration event in Paris. In recognition of their significant contributions to the Accenture Robotics Platform, Vitalie Schiopu, Florin Cremenescu, and Matthias Kaper will also attend the Greater Than Awards event.

The finalist presentations were so outstanding that the Global Management Committee has offered to sponsor the three finalist inventions so that Accenture can maximize the value of these innovations.

Visit the Accenture Robotics Platform blog to meet the broader team that has been critical to the support and success of this innovative asset.
