

Reptiles

Beware
This reptile is one of two species of venomous lizards.

Let's sing along
This nocturnal amphibian is recognized by its special call, a series of peeps.

Hide and seek
By closing its hinged shell, this turtle can protect itself from danger.

Super snake
This colorful constrictor can actually eat poisonous snakes.

See ya later, alligator
With its powerful tail, this large reptile can propel itself through the water.

Birds

Guess whooooo
These wise birds are known for their white coloring.

Tickled pink
These birds get their bright color from the food they eat.

Knock on wood
These hard-headed birds use their sharp bill to hammer through bark and wood looking for food.

Mix it up
While feeding in shallow areas, these small herons find prey by using one foot to stir the bottom.

It's a small world
This tiny, iridescent hummingbird is native to Puerto Rico.

Mammals

One of a kind
These exotic creatures are very rare because of their white coat, blue eyes and pink noses.

A tall tale
Their neck and legs are almost the same length, about 6 feet long.

Bundle up
This arctic mammal has layers of thick, white fur that traps air, keeping it warm.

to our hearts
White-spotted coat, by animal can stay in from predators.

In the run
Cheetahs have been reaching speeds of up to 60 mph during a chase.
